## Model Question Paper

## Third Semester M.Sc Degree Examination (CSS)

## ST3C15: STATISTICAL COMPUTING - 2

Time: 3 hours<br>Total Weights: 30

(Answer any three questions. Each question carries weightage 10.)

1. Samples of sizes 100 and 60 from two districts on 3 characters are given below:

$$
\begin{array}{ll}
\bar{X}_{1}=\left[\begin{array}{l}
71 \\
87 \\
95
\end{array}\right], \quad \bar{X}_{2}=\left[\begin{array}{c}
75 \\
76.7 \\
93.3
\end{array}\right], \\
A_{1}=\left[\begin{array}{rrr}
2049 & -447 & 2275 \\
& 1681 & -735 \\
& 2965
\end{array}\right], \quad A_{2}=\left[\begin{array}{rrr}
1435 & -421 & 1329 \\
& 1680 & -312 \\
& 1435
\end{array}\right] .
\end{array}
$$

Test for equality of population mean vectors, stating assumptions.
2. An experiment was carried out in RBD layout with 5 varieties of wheat in 3 replications. The results of the experiment are given below with two missing observations. Estimate the missing observations and analyse the data draw your conclusions.

|  | Varieties |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Blocks |  | $A$ | $B$ | $C$ | $D$ | $E$ |
| 1 | $\ldots$ | 185 | 157 | 162 | 141 | 136 |
| 2 | $\ldots$ | 154 | - | 155 | 157 | 184 |
| 3 | $\ldots$ | 165 | 186 | 135 | - | 215 |

3. An experiment to compare the performance of 5 varieties of rice were carried out using an incomplete block design. The five varieties are denoted as A, B, C, D and E. The result of
the experiment is reported below :

| $R_{1}$ | $R_{2}$ | $R_{3}$ | $R_{4}$ | Blocks |
| :---: | :---: | :---: | :---: | :---: |
| $A(12.4)$ | $B(18.3)$ | $C(6.5)$ | $D(13.4)$ | $B_{1}$ |
| $C(13.1)$ | $D(4.9)$ | $E(15.5)$ | $A(19.3)$ | $B_{2}$ |
| $D(6.6)$ | $E(17.4)$ | $A(18.7)$ | $B(13.6)$ | $B_{3}$ |
| $E(18.5)$ | $A(25.0)$ | $B(16.4)$ | $C(14.7)$ | $B_{4}$ |
| $B(13.1)$ | $C(8.6)$ | $D(6.4)$ | $E(12.7)$ | $B_{5}$ |

4. For a Poisson population, construct an SPRT of strength ( $0.05,0.01$ ) to test the hypothesis mean $=1.75$ against mean $=2.25$.
(i) Plot the acceptance and rejection regions on a graph.
(ii) Draw the OC and ASN curves taking 5 appropriate points.
(iii) Carry out the test for the following data on the number of defects observed in successively produced units in a factory.
$2,1,0,3,4,1,3,1,0,6,2,3,4,5,1,1$.
5. Using the data given below, and considering the size classes a strata, compare the efficiencies of the following alternative allocations of a sample of 3000 factories for estimating the total output. The sample is to be selected with SRSWOR, within each stratum :
(a) Proportional allocation.
(b) Allocation proportional to total output.
(c) Optimum allocation.

| Sl.No. | Size class number <br> of works | No. of factories | Output per factory <br> $(1000 \mathrm{Rs})$. | Standard deviation <br> (1000 Rs.) |
| :---: | :---: | :---: | :---: | :---: |
| 1 | $1-49$ | 18260 | 100 | 80 |
| 2 | $50-99$ | 4315 | 250 | 200 |
| 3 | $100-249$ | 2233 | 500 | 600 |
| 4 | $250-999$ | 1057 | 1760 | 1900 |
| 5 | 1000 and above | 567 | 2250 | 2500 |

6. An experienced farmer makes an eye estimate of the weight of peaches $x_{i}$ on each tree in an orchard of $\mathrm{N}=200$ trees. He find the total weight of $\mathrm{X}=11,600 \mathrm{lb}$. The peaches are picked and weighed on a simple random sample of 10 trees, with the following results:-

| Tree Number | Actual wt. $\left(y_{i}\right)$ | Est.wt. $\left(x_{i}\right)$ |
| :---: | :---: | :---: |
| 1 | 61 | 59 |
| 2 | 42 | 47 |
| 3 | 50 | 52 |
| 4 | 58 | 60 |
| 5 | 67 | 67 |
| 6 | 45 | 48 |
| 7 | 39 | 44 |
| 8 | 57 | 58 |
| 9 | 71 | 76 |
| 10 | 53 | 58 |
| Total | 543 | 569 |

Estimate the total actual weight using :
(a) Ratio method
(b) Regression method
(c) Simple mean per element method

Compare their efficiencies.
